Project Description

FoodLink Pro is an Android-based mobile application designed to address the critical issue of food waste by creating a smart, efficient connection between food donors and individuals or organisations in need. In today's world, a large amount of food is wasted daily from households, restaurants, hotels, and social events, while many people struggle to access basic meals. This application aims to bridge that gap using modern mobile and cloud technologies.
The application allows users to register and log in securely using Firebase Authentication. Once logged in, users can act as food donors by uploading details of surplus food, including food name, quantity, location, and images. This data is stored in a real-time cloud database (Firebase), making it instantly available to other users, such as NGOs and recipients, who are looking for food donations nearby.

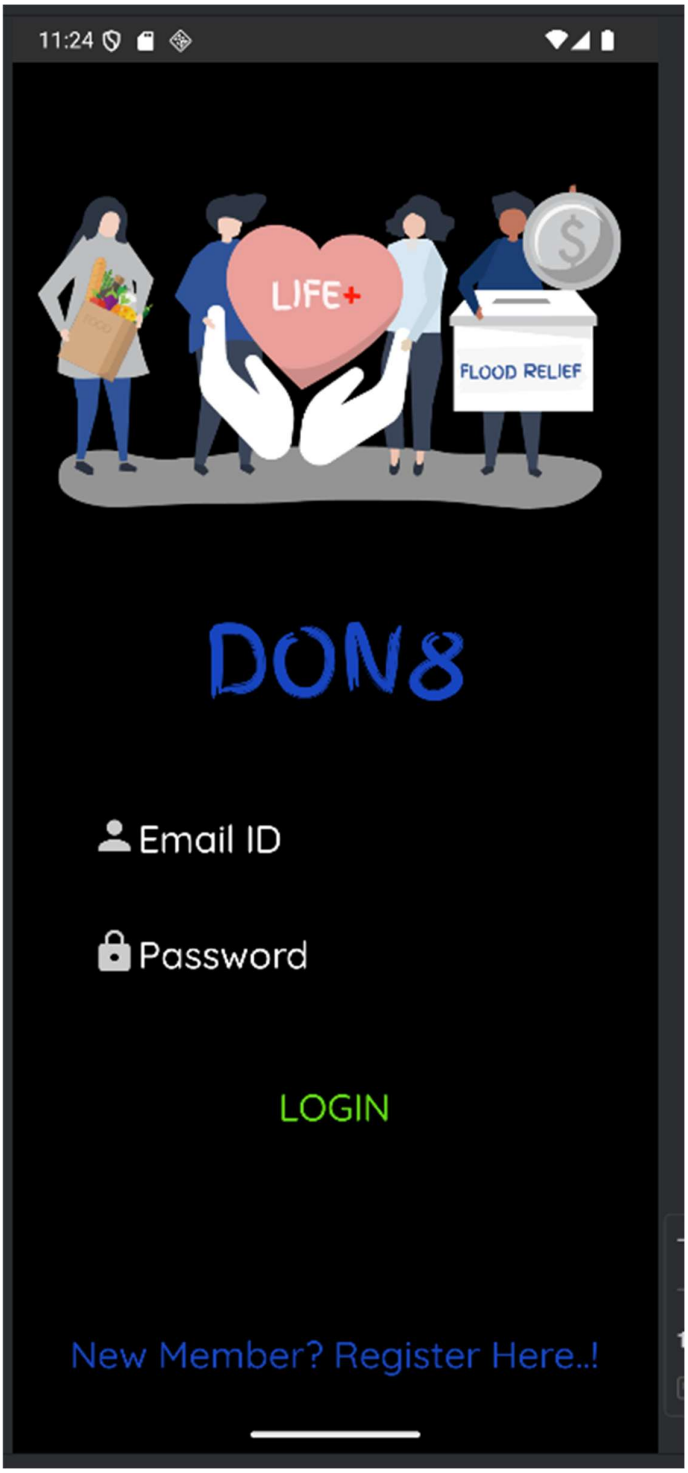
FoodLink Pro provides a simple, user-friendly interface that enables users to browse available food listings. Firebase Storage supports image uploads, ensuring transparency and trust in the donation process. The system follows a client-server architecture, with the Android application acting as the frontend and Firebase services handling backend operations such as authentication, data storage, and real-time updates.

The main objective of this project is to reduce food wastage, promote social welfare, and utilise technology to create a sustainable solution. By enabling real-time communication and efficient data sharing, FoodLink Pro ensures that excess food reaches the people who need it the most instead of being discarded.

In the future, the application can be enhanced with advanced features such as Google Maps integration for precise location tracking, push notifications for instant alerts, and AI-based analytics to optimise food distribution.

Login Page -

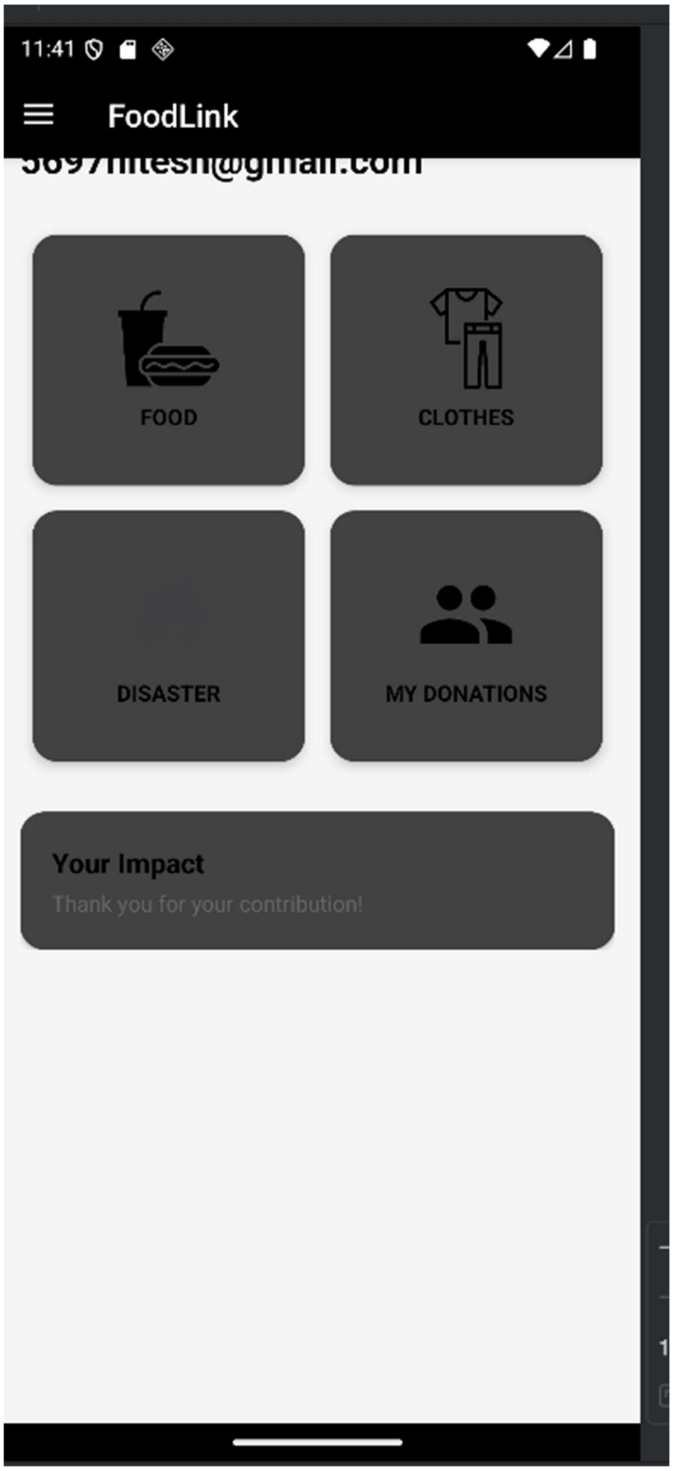
The Login Page is the entry point of the FoodLink Pro application. It allows users to securely access their account by entering their email ID and password. The page has a simple and user-friendly design with input fields and a login button.
It also provides an option for new users to register if they do not have an account. The login system ensures security by verifying user credentials before granting access to the dashboard.



Dashboard (Home Screen)

The Dashboard is the main screen of the FoodLink Pro application that appears after login. It provides quick access to key features such as Food Donation, Clothes Donation, Disaster Help, and My Donations.

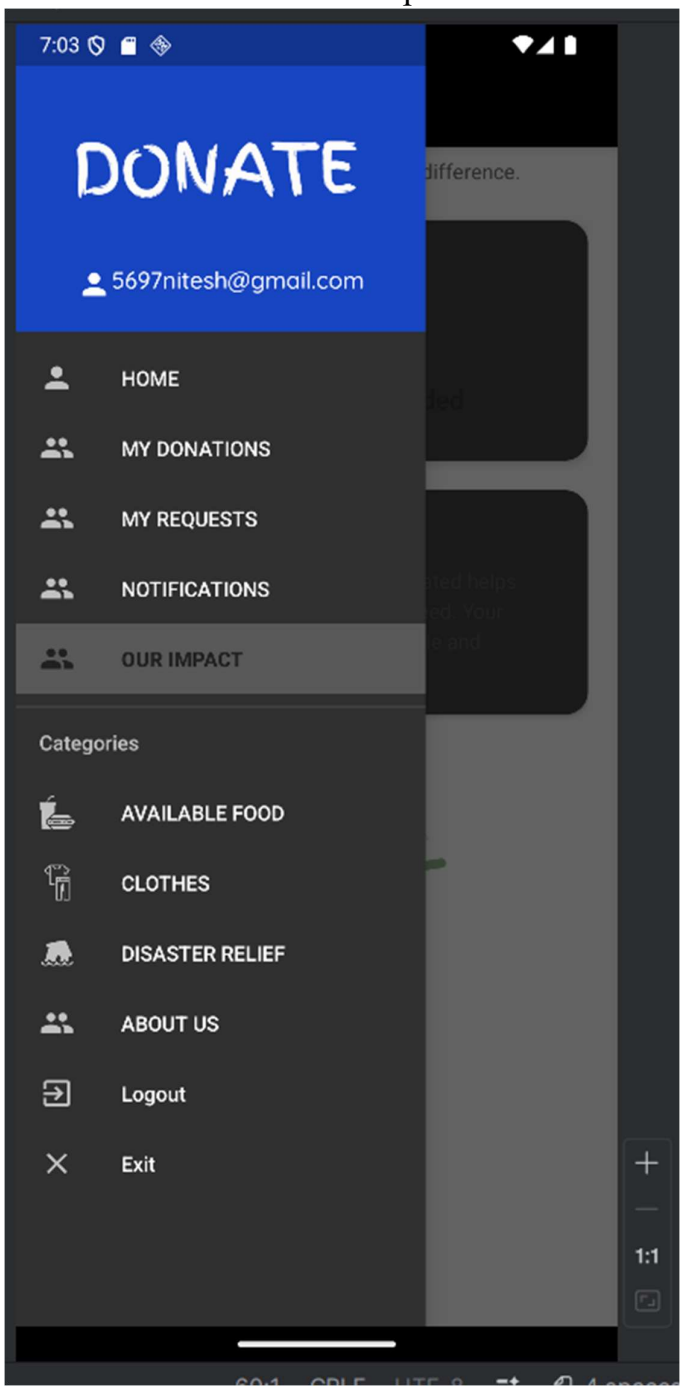
The dashboard is designed with a simple and user-friendly layout using cards, allowing users to easily navigate through different sections. It also includes an “Impact” section to show the user’s contribution.



Navigation Drawer (Menu)

The Navigation Drawer is a side menu that helps users navigate between different sections of the FoodLink Pro application. It can be accessed by tapping the menu icon on the top-left corner of the screen.

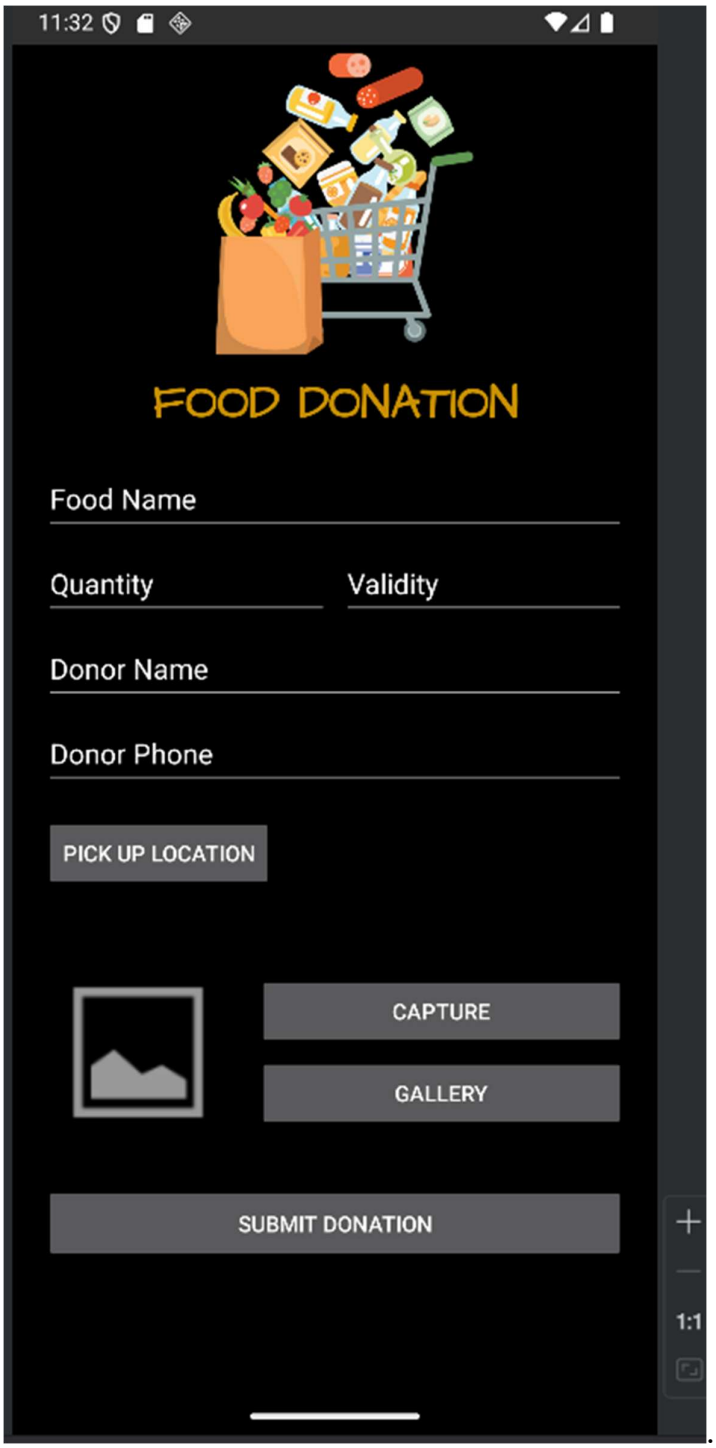
The menu includes options such as Home, My Donations/Bookings, Available Food, Clothes, Disaster Relief, About Us, and Logout. It provides a simple and organized way to access all features from one place.



Donate Surplus Food Page – FoodLink Pro

The Donate Surplus Food Page allows users to donate extra or unused food easily. Users can enter details such as food name, quantity, validity, donor information, and pickup location.

The page also provides options to upload or capture an image of the food for better clarity. After filling all details, users can submit the donation so that it can be accessed by people in need.



Impact Page – FoodLink Pro

The Impact Page shows the contribution made by users through their donations. It displays important information such as the total number of donations provided and highlights how these contributions help reduce food waste.

This page also includes a message explaining the importance of donating, encouraging users to continue supporting the community and making a positive impact.
